MAIN FUNCTIONS

- 4 independent channels for load cells: monitoring and direct management of each connected load cell.
- Immediate reporting of anomalies (also on the connected weight indicator display).
- All the TLB4 functions can be managed by a W series weight indicator connected via RS485 serial port (excluding instruments with graphic display).
- Digital equalization of the 4 channels.
- Load distribution analysis on the 4 channels with backups archive: storing, consultation, printing.
- Detailed diagnostics of each load cell (max 4): depending on the type of weighing system you can perform:
 - load automatic diagnostics;
 - automatic diagnostics on zero.
- Tilt compensation of the weighing system up to ± 10 degrees via inclinometer (not included). The weight correction is also valid for systems approved for legal for trade use.
- Archive of the last 50 significant events (zeroing, calibration, equalization, alarms): storing, consultation, printing.
- Transmission via RS485 (Modbus RTU) or fieldbus of the divisions for the 4 reading channels. Only the points of each load cell connected are transmitted, with no filter applied; the calculation of the weight value, the zero setting and calibration are made by the customer.
- Connections to:
 - PLC via analog output or fieldbus;
 - PC/PLC via RS485 (up to 99 instruments with line repeaters, up to 32 without line repeaters);
 - remote display, inclinometer and printer via RS485;
 - up to 16 load cells in parallel;
 - W series weight indicator via RS485.
- Digital filter to reduce the effects of weight oscillation.
- Theoretical calibration (via keyboard) and real calibration (with sample weights and the possibility of weight linearization up to 8 points).
- Tare weight zero setting.
- Automatic zero setting at power-on.
- Gross weight zero tracking.
- Semi-automatic tare (net/gross weight) and preset tare.
- Semi-automatic zero.
- Direct connection between RS485 and RS232 without converter.
- Hysteresis and setpoint value setting.
- TCP/IP WEB APP**
Integrated software in combination with the Ethernet TCP/IP version for remote supervision, management and control of the instrument.

EQUALIZATION WITH JUNCTION BOXES

The equalization with junction boxes and trimmers requires several manual steps and can suffer drift over time, requiring subsequent repetitions of the same procedure.

DIGITAL EQUALIZATION

The TLB4 does not require the use of the junction box thanks to the support of 4 independent channels; the digital equalization function simplifies the procedure to a single step and it is free of drift over time.

TLM8

WEIGHT TRANSMITTER - 8 INDEPENDENT CHANNELS

MAIN FUNCTIONS

- 8 independent channels for load cells: monitoring and direct management of each connected load cell.
- Immediate reporting of anomalies (also on the connected weight indicator display).
- All the TLM8 functions can be managed by a W series weight indicator connected via RS485 serial port (excluding instruments with graphic display).
- Digital equalization of the 8 channels.
- Load distribution analysis on the 8 channels with backups archive: storing, consultation, printing.
- Detailed diagnostics of each load cell (max 8): depending on the type of weighing system you can perform:
 - load automatic diagnostics;
 - automatic diagnostics on zero.
- Tilt compensation of the weighing system up to ± 10 degrees via inclinometer (not included). The weight correction is also valid for systems approved for legal for trade use.
- Archive of the last 50 significant events (zeroing, calibration, equalization, alarms): storing, consultation, printing.
- Transmission via RS485 (Modbus RTU) or fieldbus of the divisions for the 8 reading channels. Only the points of each load cell connected are transmitted, with no filter applied; the calculation of the weight value, the zero setting and calibration are made by the customer.
- Connections to:
 - PLC via analog output and fieldbus;
 - PC/PLC via RS485 (up to 99 instruments with line repeaters, up to 32 without line repeaters);
 - remote display, inclinometer and printer via RS485;
 - up to 16 load cells in parallel;
 - W series weight indicator via RS485.
- Digital filter to reduce the effects of weight oscillation.
- Theoretical calibration (via keyboard) and real calibration (with sample weights and the possibility of weight linearization up to 8 points).
- Tare weight zero setting.
- Automatic zero setting at power-on.
- Gross weight zero tracking.
- Semi-automatic tare (net/gross weight) and preset tare.
- Semi-automatic zero.
- Direct connection between RS485 and RS232 without converter.
- Hysteresis and setpoint value setting.
- TCP/IP WEB APP**
Integrated software in combination with the Ethernet TCP/IP version for remote supervision, management and control of the instrument.

CE-M version: 2014/31/EU-EN45501:2015-OIML R76:2006

- System parameters management protected by qualified access via software (password), hardware or fieldbus.
- Weight subdivisions displaying (1/10 e).
- Three operation mode: single interval or multiple ranges or multi-interval.
- Net weight zero tracking.
- Calibration.
- Alibi memory (option on request).

8 INDEPENDENT CHANNELS

The screen shows the standard automatic operating mode: the activation/deactivation status of each channel indicates the presence/absence of connection with the load cells.

Auto mode: at each power-on, the instrument automatically detects the status of the 8 channels.

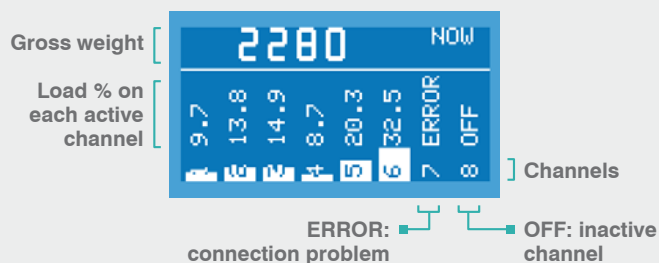

Active channels: the load cell is connected

Inactive channel: the load cell is not connected

LOAD DISTRIBUTION

The TLM8 displays, in graphical form, the current load distribution on each active channel.

LOAD CELLS INPUT TEST

The TLM8 displays, in graphical form, the load cells response signal in mV for each active channel.

TLM8

WEIGHT TRANSMITTER - 8 INDEPENDENT CHANNELS

EQUALIZATION WITH JUNCTION BOXES

The equalization with junction boxes and trimmers requires several manual steps and can suffer drift over time, requiring subsequent repetitions of the same procedure.

DIGITAL EQUALIZATION

The TLM8 does not require the use of the junction box thanks to the support of 8 independent channels; the digital equalization function simplifies the procedure to a single step and it is free of drift over time.

INPUTS/OUTPUTS AND COMMUNICATION

- RS485/RS232 serial ports for communication via protocols ModBus RTU, ASCII Laumas or continuous one way transmission.
- 8 load cell dedicated inputs.
- Ethernet TCP/IP port (option on request).

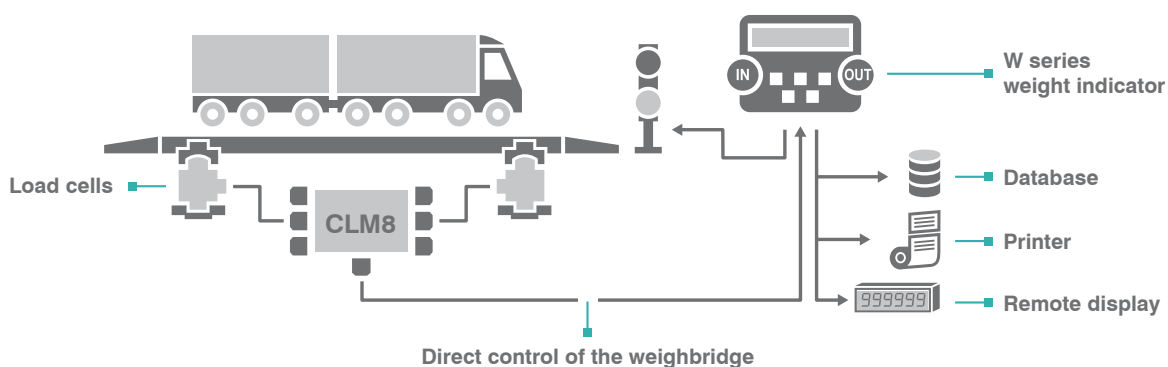

MAIN FUNCTIONS

- 8 independent channels for load cells: monitoring and direct management of each connected load cell.
- Immediate reporting of anomalies (also on the connected weight indicator display).
- All the CLM8 series functions can be managed by a W series weight indicator connected via RS485 serial port (excluding instruments with graphic display).
- Digital equalization of the 8 channels.
- Load distribution analysis on the 8 channels with backups archive: storing, consultation, printing.
- Detailed diagnostics of each load cell (max 8): depending on the type of weighing system you can perform:
 - load automatic diagnostics;
 - automatic diagnostics on zero.
- Tilt compensation of the weighing system up to ± 10 degrees via inclinometer (not included). The weight correction is also valid for systems approved for legal for trade use.
- Archive of the last 50 significant events (zeroing, calibration, equalization, alarms): storing, consultation, printing.
- Transmission via RS232/RS485 (ModBus RTU) or TCP/IP (option on request) of the divisions for the 8 reading channels. Only the points of each load cell connected are transmitted, with no filter applied; the calculation of the weight value, the zero setting and calibration are made by the customer.
- Connections to:
 - PC/PLC via RS485/RS232 (up to 99 instruments with line repeaters, up to 32 without line repeaters);
 - remote display, inclinometer and printer via RS485/RS232;
 - up to 16 load cells in parallel;
 - W series weight indicator via RS485.
- Digital filter to reduce the effects of weight oscillation.
- Theoretical calibration (via keyboard) and real calibration (with sample weights and the possibility of weight linearization up to 8 points).
- Tare weight zero setting.
- Automatic zero setting at power-on.
- Gross weight zero tracking.
- Semi-automatic tare (net/gross weight) and preset tare.
- Semi-automatic zero.
- Direct connection between RS485 and RS232 without converter.
- **TCP/IP WEB APP**
Integrated software in combination with the Ethernet TCP/IP option for remote supervision, management and control of the instrument.

CE-M version: 2014/31/EU-EN45501:2015-OIML R76:2006

DIGITAL EQUALIZATION

By placing a sample weight at each load cell, it is possible to perform the digital equalization of the weighing system. The digital equalization function simplifies the procedure to a single step and it is free of drift over time.

INCLINOMETER **NEW**

The inclinometer function uses the tilt data provided by an external sensor connected to the weighing instrument, to compensate for the variations in the detected weight value due to the inclination of the weighed structure with respect to the horizontal plane. The range of allowed inclination values is $\pm 10^\circ$.

The weight correction is also valid for systems approved for legal for trade use.

DESCRIPTION

- The WRBIL system manages weighing in batching plants that require up to 3 scales in the same production line.
- It manages from 1 to 3 scales simultaneously, with management of 22 to 31 different products distributed between scales, plus 6 products for manual additions (false scales).
- The WR26/50/1+1 and WR22/50/2+1 versions are able to manage, in addition to the loading scales, even 1 unloading scale.
- Supervisory software by PC via RS422/RS485 connection (on request).
- It is possible to select two different operating modes:
 - the second batching cycle can be started even if the other scales are at first batching cycle (max 1 cycle of displacement).
 - the second batching cycle can be started only if the other scales have finished the first batching cycle.
- In case of damage to a transmitter it is possible to connect the load cells directly to the WR ("Emergency scale" function).

The system consists of:

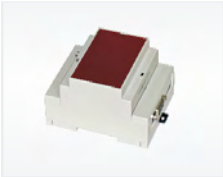

- 1 WR main unit;
- From 1 to 3 weight indicators (**M** approved): W100, W200, WDOS, WDESK, WINOX (the number of indicators depends on the number of scales);
- From 3 to 4 external 8-relay modules: suitable for mounting on Omega/DIN rail, dimensions: 93x60x126 mm; 24 VDC 8 W power supply; 115 VAC 0.5 A external contacts.

For INPUTS/OUTPUTS AND COMMUNICATION, MAIN FUNCTIONS and other data refer to instrument data sheets: WR, W100, W200, WDOS, WDESK, WINOX.

DESCRIPTION

- The WRMDB system for concrete preparation and to control batching from 2 to 4 scales and impulse water (max 20 Hz):
 - 2 scales: 6 aggregates, 2 cements, impulse water;
 - 3 scales: 6 aggregates, 2 cements, 2 weight/impulses additives, impulse water;
 - 2 scales: 10 aggregates, 4 cements, impulse water;
 - 3 scales: 10 aggregates, 4 cements, 4 weight/impulses additives, impulse water;
 - 4 scales: 8 aggregates, 4 cements, weight/impulses water, 4 weight/impulses additives.
- It allows to measure the humidity of 2 aggregates (excluding probes) and to calculate the amount of water and aggregates according to the humidity value detected.
- Suitable for **M** approved plant for concrete mixer trucks load and sale of concrete to third parties.
- Supervisory software by PC via RS422 or RS485 connection (on request).
- When more batching cycles have been programmed via keyboard, batching on one scale (aggregate, cement, additive) may start even if the other scales have not yet terminated the previous batching cycle.

The system consists of:

- 1 WR main unit.
- From 2 to 4 weight indicators (**M** approved): W100, W200, WDOS, WDESK, WINOX (the number of indicators depends on the number of scales).
- From 2 to 4 external 8-relay modules: suitable for mounting on DIN rail, dimensions: 93x60x126 mm; 24 VDC 8 W power supply; 115 VAC 0.5 A external contacts.

INSTRUMENT MANAGER

SOFTWARE FOR MANAGING THE INSTRUMENT PARAMETERS

The Instrument Manager software allows you to manage the setting of parameters, updating and monitoring of W series weight indicators and TL series weight transmitters from a PC.

The connection is made between the RS232 or RS485 serial port of Laumas instruments and the PC USB port using a RS232/USB or RS485/USB converter cable.

The software can be used on Windows 7 or higher.

MAIN FUNCTIONS

CONFIGURATIONS

- Through the Instrument Manager, you can create a complete configuration for an instrument by setting the values of all the functional parameters from a PC. You can also create complete configurations for instruments not connected to a PC and send or upload them later.
- By saving the configurations within the software, you will be able to recover them quickly and easily.
- You can compare different configurations and print a summary of the value of all the parameters, highlighting any differences.

MONITORING

- Real-time monitoring of the weight read by the instrument to analyze the pattern in relation to setpoint, stability and digital inputs/outputs.
- For *multichannel weight transmitters*: real-time display of the weight distribution on the various load cells connected to the instrument and of the mV values read individually on each channel.

REAL CALIBRATION

- Calibration of an instrument through sample weights: the procedure is guided by an interface that shows in real time the weight read by the instrument and any corrections made by the user.
- For *multichannel weight transmitters*: selection of channels and equalization of an instrument in order to standardize the weight when the position on the platform varies. Through the wizard, you can minimize errors during the procedure and display the weight distribution in real time. Through a dedicated interface, you can monitor and manually set the active channels.

AUTOMATIC FIRMWARE UPDATE OF THE INSTRUMENT

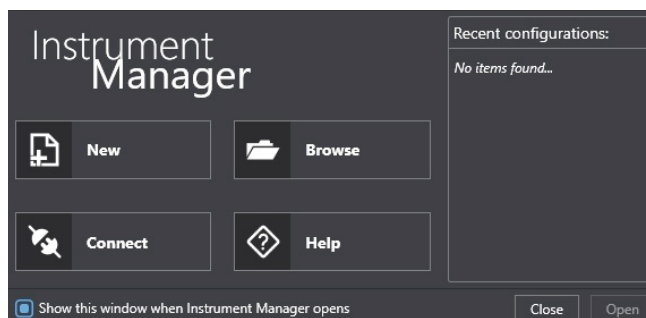

- The Instrument Manager software allows you to update the firmware of the weighing instrument by automatically downloading from the internet the new firmware distributed by Laumas. In this way, the instruments will always be updated to the latest versions.

QUALIFIED ACCESS TO LEGALLY RELEVANT PARAMETERS

- Instrument Manager allows simple management of legally relevant parameters for approved instruments, keeping them protected from unauthorized access.

MULTICHANNEL

PROG DB

SOFTWARE FOR DATA STORAGE ON PC

The PROG DB software enables managing via PC any data (performed weighings, batching procedures, alarms) coming from various instruments of the W200, WDOS, WDESK, WINOX, WTAB series.

Data is transferred from the instrument to the PC:

- via USB key (OPZWUSB option);
- in serial mode (OPZWDATIPC option): RS232 for distances shorter than 15 metres, or RS485 via converter.

The software runs under Microsoft Windows XP/Vista/7/10.

MULTILINGUE
SOFTWARE

MAIN FUNCTIONS

- Software included in the supply of OPZWDATIPC and OPZWUSB options.
- Automatic recognition of new connected instruments.
- Customization of the instruments with name and notes.
- Display of single instrument data.
- Search among data of all the instruments (consumption and production included), with the possibility to activate filters.
- Export of displayed data and of the search procedures conducted in CSV.
- Printing of displayed data and of the search procedures conducted.

OPERATING SPECIFICATIONS FOR BASE MOD. INDICATORS

- Storage of the current weight value by manual control (from the keypad or an external input) and/or automatic control (by using the built-in timer). Each stored record includes: gross weight, net weight, tare, unit of measurement, number of decimals, date and time, Alibi ID (only if the alibi memory is available) and the peak or coefficient.
- Recording of weight samples at the instrument's maximum speed (300 Hz).
- Recording the weight beyond the threshold: the instrument's setpoints can be used to create a system that stores the moment when the weight exceeds a certain threshold.

- Data recording for stress tests (only for OPZWUSB):
 - This mode enables the recording of weight values up to the instrument's maximum sampling speed (300 Hz).
 - During the test, the instrument saves the values temporarily in the internal memory (max. 5000 samples), and at the end of the test, it transfers them to the USB key. The adjustment of the built-in timer value (3 to 999 ms) allows the continuous recording for a period of 15 to 4995 secs.
 - A setpoint can be used to set the recording start at the moment when a certain weight is reached. Then, storage will end automatically when the weight goes beyond the set threshold value.

OPERATING SPECIFICATIONS FOR LOAD, UNLOAD, 3/6/14 PRODUCTS MOD.

- Storage of all data related to the batching cycles performed, such as: formula number, current cycle number, scale number, date and time together with product number (the latter for each batched product), theoretical value and actual value.

MEMORY FULL SIGNAL

- Check of the memory usage status. When the memory usage status reaches the set thresholds, a signal is sent. When the memory is 100% full, older data are overwritten (circular memory).

PROG WRBIL

SUPERVISORY SOFTWARE FOR WRBIL

The PROG WRBIL software allows supervision the WRBIL system by means of a PC connected by RS232 for distance lower than 15 meters, or RS485 for distance up to 1500 meters by means RS232/485 converter.

The program allows to view the state of the plant in a synoptic for an intuitive graphical interface of the system, viewing the outputs for control of electric valves, temperature feelers, taps etc.

The software runs under Microsoft Windows 98/2000/XP/7/10. RS232 port is used for PC communication (communication is also possible by using a USB to RS232 converter).
